Preface	
<i>Marcelle Rey-Campagnolle</i>	v
Part I — The science of particle accelerators—JUAS Course 1 ...	1
I.1 — Electromagnetism	
<i>Heino Henke</i>	3
I.2 — Special relativity	
<i>Heino Henke</i>	39
I.3 — Transverse beam dynamics	
<i>Bernhard Holzer</i>	73
I.4 — Longitudinal beam dynamics	
<i>Alexandre Lasheen</i>	167
I.5 — MAD-X simulation code	
<i>Nuria Fuster Martínez</i>	257
I.6 — PyHEADTAIL tutorials	
<i>Benoit Salvant</i>	313
I.7 — Injection and extraction	
<i>Nicola Carmignani, Thomas Perron</i>	323
I.8 — Transverse linear imperfections	
<i>Hannes Bartosik, Davide Gamba</i>	341
I.9 — Transverse nonlinear effects	
<i>Hannes Bartosik, Sofia Kostoglou</i>	385
I.10 — Synchrotron radiation	
<i>Rasmus Ischebeck</i>	433

I.11 — Linear particle accelerators	
<i>David Alesini</i>	479
I.12 — Collective effects	
<i>Mauro Migliorati</i>	539
I.13 — Cyclotrons and fixed field alternating gradient accelerators	
<i>Bertrand Jacquot</i>	605
I.14 — Accelerator design workshop	
<i>Bastian Härer, Adrian Oeftiger</i>	661
Part II — The technology and applications of particle accelerators—JUAS Course 2	731
II.1 — Introduction to radio frequency engineering	
<i>Andrea Mostacci</i>	733
II.2 — RF engineering	
<i>Christine Vollinger, Manfred Wendt</i>	765
II.3 — Normal conducting magnets	
<i>Thomas Zickler</i>	1001
II.4 — Superconductivity: introduction on RF vs. magnets	
<i>Claire Z. Antoine</i>	1057
II.5 — Superconducting RF cavities	
<i>Fritz Caspers, Sergio Calatroni</i>	1085
II.6 — Superconducting magnets	
<i>Paolo Ferracin</i>	1155
II.7 — Cryogenics for superconducting devices	
<i>Philippe Lebrun</i>	1243
II.8 — Vacuum systems	
<i>Vincent Baglin, Roberto Kersevan</i>	1259
II.9 — Beam instrumentation	
<i>Peter Forck</i>	1339
II.10 — Particle sources	
<i>Thomas Thuillier</i>	1529

II.11 — Survey and alignment of accelerators	
<i>Jean-Christophe Gayde</i>	1601
II.12 — Accelerator controls	
<i>Elke Zimoch</i>	1637
II.13 — Radiation safety	
<i>Xavier Queralt</i>	1653
II.14 — Applications of low-energy accelerators	
<i>Willy Mondelaers</i>	1757
II.15 — High-power proton linacs	
<i>Mamad Eshraqi</i>	1795
II.16 — Accelerators for medical and industrial applications	
<i>Erik Van Der Kraaij, Wiel Kleeven</i>	1817
II.17 — Physics and accelerators for particle therapy	
<i>Jacobus Maarten Schippers</i>	1841
II.18 — Life-cycle and operability of particle accelerators	
<i>Samuel Meyroneinc</i>	1853
Part III — A century of particle accelerators—JUAS seminars	1869
III.1 — Particle accelerators, instruments of discovery in physics	
<i>Philippe Lebrun</i>	1871
III.2 — Particle accelerators in the XXI century	
<i>Maurizio Vretenar</i>	1889
III.3 — Introduction to CERN and its accelerator complex	
<i>Reyes Alemany Fernández</i>	1903
III.4 — Colliders for particle physics	
<i>Oliver Brüning, Massimo Giovannozzi, John M. Jowett, Elias Métral,</i> <i>Louis Rinolfi, Todd Satogata, Daniel Schulte, Frank Zimmermann</i>	1925
III.4.1 — Introduction	
<i>Elias Métral</i>	1925
III.4.2 — LHC and HL-LHC	
<i>Oliver Brüning</i>	1939

III.4.3 — Nuclear collisions at the LHC	
<i>John M. Jowett</i>	1953
III.4.4 — The Future CERN Circular hadron collider	
<i>Massimo Giovannozzi</i>	1971
III.4.5 — Electron-positron circular colliders	
<i>Frank Zimmermann</i>	1981
III.4.6 — Future high-energy linear lepton colliders	
<i>Louis Rinolfi</i>	1991
III.4.7 — The US electron ion collider	
<i>Todd Satogata</i>	2005
III.4.8 — Muon collider	
<i>Daniel Schulte</i>	2011
III.5 — Non-linear beam manipulations in the transverse space	
<i>Massimo Giovannozzi</i>	2017
III.6 — Beam coupling impedance measurements with beam and on a bench	
<i>Nicolò Biancacci</i>	2029
III.7 — X-ray free-electron-lasers	
<i>Eduard Prat</i>	2057
III.8 — Energy recovery linacs	
<i>Michaela Arnold</i>	2073
III.9 — Accelerator driven systems	
<i>Frédéric Bouly</i>	2085
III.10 — Dielectric laser accelerators	
<i>Benedikt Hermann</i>	2119
III.11 — Radiation oncology: biology, physics and clinical applications	
<i>André Durham</i>	2123
III.12 — Machine learning	
<i>Jochem Snuverink</i>	2131
III.13 — CERN LIU project: beam dynamics aspects and solutions	
<i>Giovanni Rumolo</i>	2141

III.14 — CERN beamline for fixed-target experiments	
<i>Alexander Gerbershagen</i>	2155
III.15 — Plasma wakefield acceleration and the AWAKE experiment at CERN	
<i>Edda Gschwendtner</i>	2167
III.16 — Magnets for future colliders: the Muon Collider as a case study	
<i>Luca Bottura</i>	2179
Part IV — Appendix: Origin and history of JUAS	2201
IV.1 — The origin of JUAS, 1990–1993	
<i>Marcelle Rey-Campagnolle, Louis Rinolfi</i>	2203
IV.2 — The history of JUAS, 1994–2024,	
<i>Marcelle Rey-Campagnolle, Joël Le Duff, François Méot, Louis Rinolfi,</i> <i>Philippe Lebrun, John M. Jowett, Elias Métral, Bob Holland</i>	2211
IV.3 — JUAS during the period 1994–2000	
<i>Marcelle Rey-Campagnolle</i>	2239
IV.4 — JUAS during the period 2001–2005	
<i>Joël Le Duff</i>	2263
IV.5 — JUAS during the period 2006–2010	
<i>François Méot</i>	2273
IV.6 — JUAS during the period 2011–2016	
<i>Louis Rinolfi</i>	2287
IV.7 — JUAS during the period 2017–2020	
<i>Philippe Lebrun</i>	2337
IV.8 — JUAS during 2021	
<i>John M. Jowett</i>	2349
IV.9 — JUAS during the period 2022–2024	
<i>Elias Métral</i>	2357
